ABSTRACT

This Kids Count report highlights state and countywide findings on key indicators affecting the educational and life success of Ohio's children. The statistical portrait is based on five indicators: (1) fourth graders' performance on the Ohio fourth grade reading proficiency test; (2) number of children receiving child care assistance or participating in Head Start programs; (3) children's health status; (4) participation in programs that alleviate poverty and promote self-sufficiency; and (5) family movement from welfare to work. Findings indicated that 68 percent of the fourth graders taking the reading proficiency test in 1998 passed; under new 1999 proficiency standards, only 47 percent would have passed. More than \$277 million was available in fiscal year 1999 for child care assistance, with a monthly participation of 62,618 children. Head Start participation was 57,159 children in 1998. About 40 percent of Ohio infants born in 1997 had at least one risk factor. In 1997 almost 8 percent of infants were born at low birthweight. The number of children enrolled in Medicaid in December, 1998 was 560,731 and was expected to increase by approximately 104,000. Over 670,000 Ohio families received the federal Earned Income Credit in 1997. Thirty-four percent of families owed child support received at least one cash payment in 1997, up from 21 percent in 1990. Ohio public assistance caseloads dropped by 46 percent from September 1995 to September 1998. However, more than 26,077 Ohio adults may use up their time limit by October, 2000. The report concludes with data definitions, data sources, and calculations. (KB

About Children's Defense Fund

Children's Defense Fund (CDF) was founded in 1973 by Marian Wright Edelman to provide a strong and effective voice for the children of America who cannot vote, lobby, or speak for themselves. We pay particular attention to the needs of poor and minority children and those with disabilities. Our goal is to educate the nation about the needs of children and encourage preventive investment in children before they get sick, drop out of school, or get into trouble.

CDF is a unique organization because it focuses on programs and policies that affect large numbers of children, rather than on helping families on a case-by-case basis. CDF educates the public about the conditions of children and successful programs. We work to shape federal, state, and local policies for children by identifying cost-effective remedies.

Our main office is in Washington, D.C. CDF-Ohio began its work in Columbus in 1981 and is the oldest CDF-state office. Ohio leads the country in grassroots support for CDF's local work through its Greater Cincinnati and Greater Columbus projects. CDF also maintains offices in California, New York, Minnesota, Mississippi, and South Carolina.

CDF is a private, nonprofit, nonpartisan, research and advocacy organization supported by foundations, corporate grants, and individual donations. As an independent voice for children, CDF does not accept government funds.

This publication as well as CDF's general research is supported by the KIDS COUNT Project of The Annie E. Casey Foundation. *Helping Children Learn: A County-by-County Factbook* is the third in the series *For Children For Ohio's Future*. In May 1998 CDF-Ohio released *Child Care: A County-by-County Factbook*; in October 1998, *Teen Births: A County-by-County Factbook*.

This factbook represents hundreds of hours of research, writing, and fact-checking by the CDF staff. Erin Joyce is CDF-Ohio's key researcher in education, and in other areas as needed. Mary Wachtel, Health Advocate; Chris Stoneburner, Child Care Advocate; and Robin Harris, Antipoverty Advocate contributed to their respective sections. Susan Hill researched the Ohio births, earned income credit, and child support sections. Communications Manager David Norris designed the fact sheets, reviewed each page carefully, and helped provide a unified voice through skillful editing. Melinda Taylor Swan, of Taylor-Made Strategic Research & Communications, provided editorial and strategic advice. David Browning, of Browning Design, consulted on layout and acted as liaison with the printer.

Marian Wright Edelman and the CDF Board join me in thanking these dedicated professionals.

Mark Real

Introduction

Helping Children Learn: A County-by-County Factbook

Helping Children Learn highlights key indicators that affect the educational and life success of nearly three million Ohio children. Review these pages to better understand how education and family economics can shape children's lives and futures.

Consider the following:

- Only 47% of fourth graders tested would have passed Ohio's tougher 1999 fourth grade reading test. Students in high-poverty districts experienced the greatest difficulties in meeting reading standards.
- Children remain the poorest group of Ohioans, despite the fact that the number of children depending on public assistance fell by 43% from September, 1995, to September, 1998. The majority of Ohio's poor children live in families where the head of the household works.
- National research confirms that high-quality preschool programs improve language ability and pre-math skills.

Educational skills—especially the ability to read—lay the foundation for every child's progress. But while our public schools are responsible for teaching those skills, educational achievement is not as simple as "if we teach it, they will learn it."

Many of the students who struggle to learn today live in poverty. Their lives are marked by instability in housing, lack of regular, nutritious food, inadequate health care and too little adult supervision after school. These factors, in turn, affect whether they attend school regularly, whether they stay with the same teacher throughout a school year, how they interact with peers, and ultimately, how well they learn core academic skills.

Health clearly plays a role in education. Both delayed prenatal care and low birthweight can increase the likelihood of a child experiencing learning disabilities and subsequently requiring special education services. Comprehensive health services such as immunizations, school physicals, and hearing, vision, and dental screening help keep children healthy and able to learn.

Ohio's bipartisan effort to improve children's lives recognizes and responds to the relationship between child poverty and school performance. Our state understands that investments in targeted, cost-effective health care and early childhood programs can improve child health and safety, promote stable and productive families, and help children achieve their academic potential.

Using the Factbook

In the following pages we profile each Ohio county's children using information on educational achievement and economic status.

Education

- *The performance of fourth graders on Ohio's fourth grade reading proficiency test*, measured by both 1998 and 1999 standards, along with the rate of free or reduced-priced lunches served to eligible children in the largest public school districts in each county.
- *The number of children who receive child care assistance or participate in Head Start programs that can help them develop pre-reading skills*. Both child care assistance and Head Start now serve more children from low- and modest-income working families. Between 1995 and 1998, child care participation grew by 50%, while Head Start experienced 17% growth.

Family Economics

- *Child health status* featuring a profile of Ohio newborns, including the fact that 40% of Ohio newborns are at risk of childhood poverty and difficulties at school, and information on the 133,000 children in working families potentially eligible for the Children's Health Insurance Program.
- *Participation in programs that alleviate poverty and promote self-sufficiency*, such as the one million youngsters eligible for child support, and facts about the nation's most successful public antipoverty program, the federal Earned Income Credit, which benefits more than one million Ohio youngsters.
- *A portrait of Ohio's welfare-to-work program*, which shows a threefold increase in the number of adults with paychecks and reports that parents remaining on welfare are less likely to have a high school diploma than those who have left.

Thanks to strong bipartisan efforts over the last two decades, Ohio has made great strides for children. We are one of eight states recognized as a national leader for children by Columbia University's National Center for Children in Poverty. We extend health and child care to more low- and modest-income working families than ever before. And we lead the nation in offering Head Start and collecting child support through wage withholding.

We also find ourselves with a historic opportunity to change the future for our children. Due to sweeping changes in how welfare, health, and child care programs are administered and the pending Ohio Supreme Court case challenging us to improve public education, our state government has more authority than ever before to improve children's lives.

CDF-Ohio has provided reports on the status of children since 1981. We strive to provide information that assists communities and our state in identifying and responding to specific challenges.

The same information detailed on these pages also can be found on CDF-Ohio's web site (<http://www.cdfohio.org>). Visitors to our web site also can download our reports and 1998 county fact sheets on child care and teen births, as well as our most recent policy recommendations report, *Windows of Opportunity: Ohio Children and the 1998 Election*.

We hope Ohio leaders will use this factbook to structure an informed debate about how to improve the lives and educational opportunities of our children.

For Ohio's Children,

Mark Real, Director
Children's Defense Fund-Ohio

Education

Ohio's Fourth Grade Reading Guarantee

Sixty-eight percent of the 125,823 fourth graders who took Ohio's fourth grade reading proficiency test in March, 1998, passed the test.⁽¹⁾ Under new 1999 proficiency standards, only 47% would have passed.⁽²⁾ This means that 53%, or 66,096 students,⁽³⁾ would require the reading intervention that Ohio law requires school districts to provide to students who do not pass the test.

Thirty-six percent of those who took the test, or approximately 45,000 students, were close to passing, according to research by the Ohio Department of Education.⁽⁴⁾ These students might need some extra help in reading and could benefit from interventions such as summer school and tutoring. This same research shows that at least 21,000 students, or 17% of those who took the test, had very low scores,⁽⁵⁾ so low that they likely would not be prepared to do fifth grade work and might need intensive intervention to succeed. These are the students who would most benefit from early reading intervention in preschool, kindergarten, and the early primary grades.

How This Affects Ohio Children

The 1998–1999 class of first graders will be the first class subject to Ohio's new "Fourth Grade Reading Guarantee." When they reach the fourth grade, they will have three opportunities to pass the fourth grade reading proficiency test: once in the fall, a second time in the spring, and one final time during the summer before fifth grade. If a student does not pass by the third administration of the test, that child cannot move on to the fifth grade, unless the child's reading teacher and principal determine that he or she is capable of doing fifth grade work.

To prepare to meet this guarantee, Ohio's public school districts began during the 1999–2000 school year to assess students' reading abilities at the end of first, second and third grade. Districts will notify the parents of those students not reading at grade level and invite them to work with the child's classroom teacher to develop and implement a strategy to improve the child's reading skills. School districts must also offer intensive summer remediation to third graders not reading at grade level. Additionally, as of July 1, 2001, districts will be required to offer summer remediation to those fourth graders who do not pass the test by the end of the school year.

History

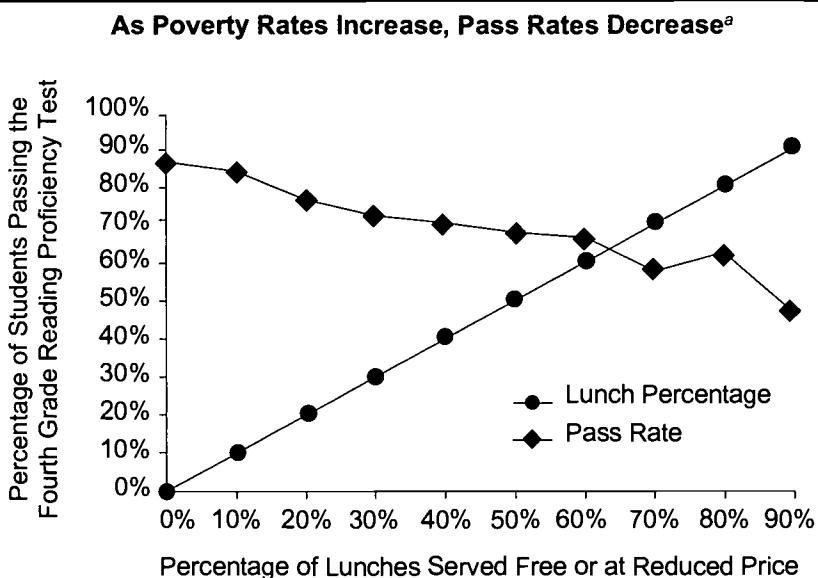

Ohio House Bill 55 established the Fourth Grade Reading Proficiency Test in 1992. The proficiency test's purpose was to identify students who were not proficient readers so they could receive reading intervention in the fifth grade. In 1997, Ohio Senate Bill 55 established new accountability standards for Ohio's schools, including the Fourth Grade Reading Guarantee. Each year since 1995, the score students have had to earn to be "proficient" has increased, with the final "proficient" standard in place for the 1999 test.

**The 1998–1999
class of first
graders will be
the first class
subject to
Ohio's new
"Fourth Grade
Reading
Guarantee."**

If the new, higher 1999 proficiency score were applied to the 1998 administration of the fourth grade reading test, only 47% of Ohio students would have passed, and no district in Ohio would have had a pass rate higher than 84%.

Proficiency and Poverty

A good measure of poverty within a district is the percentage of lunches it serves either free or at a reduced price as part of the federal school lunch program. Statewide, 47% of lunches served in Ohio's public school districts are either free or reduced price.⁽⁶⁾ Children from families earning up to 130% of the federal poverty level (\$14,378 for a family of two) may receive free school lunches; those children whose families earn up to 185% of the federal poverty level (\$20,461 for a family of two) are eligible for reduced-price lunches. In general, districts with higher percentages of students receiving lunch aid tend to have lower percentages of children passing the test.

^a Sources: proficiency test results, endnote 1; school lunch data, endnote 6. Calculations by CDF-Ohio.

Seventeen percent of Ohio's schoolchildren—309,928 students—attend one of eight large metropolitan urban school districts.⁽⁷⁾ The "Big Eight" districts have significantly higher poverty rates and significantly lower pass percentages than the average Ohio school district.

Some Ohio school districts do not follow this trend. Not all high-poverty districts or schools have low pass rates for the fourth grade reading proficiency test. The challenge is to look closely at these districts and see what factors contribute to their better than expected results.

North Carolina and Texas Make Significant Proficiency Gains

Ohio can also look to North Carolina and Texas for examples of high-poverty districts that meet high academic expectations. These two states showed the largest average gains among states who participate in the National Assessment of Student Progress⁽⁸⁾ (Ohio is one of 11 states that does not participate in this national proficiency test). Not only did students in North Carolina and Texas show improvement on the national proficiency test, they also showed similar rates of improvement on their respective state proficiency tests.

**Poverty and Fourth Grade Reading Proficiency Test Pass Rates
in Ohio's "Big Eight" Urban School Districts**

District	Enrollment ^a	Free or Reduced- Price Lunches ^b	Pass Rate ^c
Akron	31,992	80%	48%

What makes Texas and North Carolina really shine is that these gains cut across racial and ethnic groups. In Texas, Hispanic and black students made larger gains than did non-Hispanic white students. North Carolina's black and non-Hispanic white students progressed at a similar rate, although the state's small group of Hispanic students made smaller gains.⁽⁹⁾ Both North Carolina and Texas have higher rates of child poverty than Ohio, according to a report from the Annie E. Casey Foundation.⁽¹⁰⁾ Census data show that these two states also have higher poverty rates among the general population than Ohio.⁽¹¹⁾

Conclusion

Ohio has much work to do to live up to the guarantee that every Ohio child will be able to read at grade level by the fourth grade. If the new, higher 1999 proficiency score had been applied to the 1998 administration of the fourth grade reading test, only 47% of Ohio students would have passed, and no district in Ohio would have had a pass rate higher than 84%.⁽¹²⁾

Early Care and Education: Opportunities for Reading Readiness

Child Care Assistance

Ohio's child care assistance program helps low- and modest-income parents work and afford child care. Without this assistance, these parents would face average child care costs of nearly \$100 per week, or \$5,200 per year, for one child.⁽¹³⁾ The average annual cost of child care is comparable to the cost of tuition for four quarters at The Ohio State University, which during the 1998–1999 school year was \$5,172.⁽¹⁴⁾ Care for infants and toddlers is even more expensive.

In state fiscal year 1999, more than \$277 million was available to help families purchase child care, to improve child care quality, and to administer the program.⁽¹⁵⁾ The Ohio Department of Human Services provides child care assistance through 88 county departments of human services. In December, 1998, approximately 63,000 children participated.⁽¹⁶⁾ Between 1995 and 1998 the average monthly participation grew from 41,852 to 62,618 children.⁽¹⁷⁾

**Most Ohio
youngsters
receiving child
care assistance

State Fiscal Year 1999 Child Care Funding	
Federal Child Care and Development Block Grant	\$136.0 million
Federal Social Services Block Grant	15.0 million
Federal Temporary Assistance to Needy Families (TANF) Block Grant	49.9 million
State GRF Funds	76.4 million
Total	\$277.3 million^a

^a 122nd General Assembly of Ohio. *Amended Substitute House Bill 215*.

How This Affects Ohio Children

Because child care costs can easily consume 25% of family income or more, Ohio's child care assistance program makes it possible for some low- and modest-wage-earning families to afford child care in licensed centers and certified family day care homes. These facilities at least meet minimal health and safety standards. Child care assistance helps families avoid relying on uninspected arrangements or, worse, leaving children home alone or in the care of older siblings.

History

Since 1974, Ohio has provided direct child care assistance through federal funding and, more recently, through additional state funding. In 1984, just over 14,000 children received child care assistance,⁽¹⁸⁾ compared to 63,000 in 1998. Most Ohio youngsters receiving child care assistance have working parents who are not on welfare.⁽¹⁹⁾

In 1988, federal funds for child care began to increase. At the same time, state expenditures also increased as a result of state matching requirements. In 1996, federal child care programs were consolidated into the Child Care and Development Block Grant. A state matching requirement continues.

The Child Care and Development Block Grant exists to help low-income families find and afford quality child care and to enhance the quality and increase the supply of child care for all families.

How Child Care Assistance Works

While the Ohio Department of Human Services (ODHS) serves as the lead agency for child care assistance, county departments of human services administer child care assistance at the local level. In most Ohio counties, families must apply in person at a county department of human services office for child care assistance. All parents who receive help pay a portion of the cost based on their income and family size.

Who Is Eligible?

In 1998, the Ohio General Assembly established the maximum income for eligibility at 185% of the federal poverty level. Parents, including those receiving cash assistance, must work or participate in an education or training program. A parent with one child loses eligibility for child care aid once she earns \$9.85 an hour (1999 poverty guidelines).

A small number of children also participate in cases of special need, such as protection from child abuse and neglect.

Where Is Child Care Provided?

Parents may have several options when selecting child care providers.

Parents may choose from

- child care centers licensed by the Ohio Department of Human Services;
- programs licensed by the Ohio Department of Education;
- family day care homes certified by county departments of human services;
- relatives and friends; and
- some summer day camps.

**Children in
high-quality
programs have
greater language
ability and better
pre-math skills.**

Opportunities for Reading Readiness

If national patterns hold true in Ohio, more than one-half million Ohio children younger than age six are in some form of child care each day.⁽²⁰⁾ More than 200,000 children attend nearly 3,500 licensed child care centers, yet little has been done to improve the quality of these programs.⁽²¹⁾ Ohio's 1985 child care licensing law established only minimal health and safety standards. Ohio law offers no protections for children in family day care homes unless child care assistance funding is used to help pay for care.

Children in high-quality programs have greater language ability and better pre-math skills.⁽²²⁾ High-quality programs better prepare children for school by developing brain circuitry that allows them to reach their full potential. [For more information on child care in Ohio, see CDF-Ohio's *Child Care: A County-by-County Factbook* (1998), available for download from our web site (<http://www.cdfohio.org>).]

Head Start is enrolling more children from working poor families than ever before. At least one parent worked in 56% of Ohio Head Start families in 1997–1998.

Head Start

Head Start serves preschool children from very low income families. Children ages three and four are eligible as long as family income does not exceed 100% of the federal poverty level (\$11,060 annually, or \$5.32/hour, for a parent with one child in 1999). Ohio leads the nation in state support for Head Start: more than 75% of eligible children are enrolled, compared with approximately 40% nationally.⁽²³⁾ Between 1995 and 1998, total enrollment grew from 48,956 to 57,159 children.⁽²⁴⁾ Nearly 22,000 of the children enrolled in 1998 were supported through state funding, up from only 2,171 children in 1990.

How This Affects Ohio Children

Unlike most other states, poor preschoolers in Ohio have the opportunity to attend Head Start at the same rate as their more affluent peers attend early education programs.⁽²⁵⁾ State funding has leveled the playing field for these children and targeted resources to the least served counties, giving eligible children nearly the same chance to attend regardless of where they live.

History

The federal Head Start program began in 1965 as a part-day, summer program for poor children. Its goal was to improve social skills and help children prepare for their future, including elementary school. Over time the program has shifted to primarily a part-day, school-year schedule.

In 1989 the nation's governors and then-President Bush convened an education summit to define several national education goals. The first goal focused on school readiness for all children; one objective became to provide all disadvantaged and disabled children access to high-quality preschool programs. A key part of Ohio's response to the summit included expanding Head Start.

With bipartisan support, the first expansion of Head Start through state funding began in Ohio in 1990. Ohio is one of 12 states that provide direct funding to Head Start.⁽²⁶⁾ Nearly \$100 million of Ohio's general revenue funding supported state Head Start enrollment in 1998–1999.⁽²⁷⁾

How Head Start Works

Federal Head Start funding flows directly to local community-based agencies. Once established, these programs receive federal funding as long as they meet federal Head Start requirements. State Head Start funding is managed by the Ohio Department of Education.

Head Start provides a range of services including preschool education and health, dental, mental health and nutrition services. The program also links families with needed social services, offers specialized services for children with disabilities, and encourages parent involvement and training. Children may attend a center-based program that operates at least 16 hours per week. Many programs operate longer hours. Some children participate in a home-based model where teachers help parents to teach their children.

Parent involvement is a hallmark of Head Start. In addition to volunteer and training opportunities, all programs have a Policy Council made up of parents

and community representatives. The Council makes decisions about how the program operates and must be involved in the hiring and approval of new staff.

Head Start is available in all 88 Ohio counties. Programs are housed in community facilities, schools, religious institutions, office buildings, child care centers and family day care homes. Sites must meet building, health and safety, and licensure standards. Transportation is usually provided on Head Start buses.

Ohio Head Start Profile: 1997- 1998 School Year^a

50% of enrolled children were white

35% of Head Start families were headed by two parents

46% of enrolled children were black

46% of Head Start families had annual incomes less than \$6,000, less than half the federal poverty level for a family of three in 1998

4% of enrolled children were Hispanic or other races

56% of Head Start families had at least one working parent

^aSource: United States Department of Health and Human Services, Region V, Chicago, Illinois. 1997-1998 Program Year PIR Data for Ohio. Calculations by CDF-Ohio.

Once enrolled, children remain eligible until they reach compulsory school age. Head Start must reserve at least 10% of its enrollment spaces for children with disabilities. In addition, on the basis of locally identified needs or risk factors, some children may be enrolled even if family income exceeds 100% of poverty. These spaces are limited to no more than 10% of enrolled children.⁽²⁸⁾

Ohio Is a Leader in Head Start/Child Care Partnerships

Head Start is enrolling more children from working poor families than ever before. At least one parent worked in 56% of Ohio Head Start families in 1997-1998.⁽²⁹⁾ As a result of this increase in working families, more than 6,000 children enrolled in Head Start now receive their Head Start services in either a child care center or family day care home.⁽³⁰⁾ This way, parents can work and their children can receive the full range of Head Start services in the child care setting.

Opportunities for Reading Readiness

The 1998 federal reauthorization of Head Start specifically added "school readiness" to Head Start's purpose and set new standards for language and literacy skills. Likewise, 50% of Head Start teachers must have at least an associate's degree by 2003.⁽³¹⁾ Thirty-five percent of Ohio's Head Start teachers held degrees in early childhood education in 1997-1998.⁽³²⁾

Family Economics

Health Status: Growing And Learning

Risk Factors in Ohio Births

In 1997, 40% of Ohio newborns had a teen mother, a mother without a high school diploma, or unmarried parents—all major barriers to overcome. Seventeen percent of these infants faced two of these barriers, while 7% faced all three. All of these children are at a higher risk of performing below average academically and of living in poverty during their childhood.

How This Affects Ohio Children

The incidence of poverty and poor academic performance increases with each subsequent factor. Not every baby with a teen mother, a mother without a high school diploma, or unmarried parents is destined to perform poorly academically or to live in poverty. Many resilient children and parents beat the odds. However, increasing the percentage of parents who are high school graduates and married adults will increase the likelihood that their children will succeed.

Births to Ohio Teen Parents Remain High

In 1997, 20,161 babies were born to Ohio teen mothers, compared with 23,003 born in 1990. The percentage of births to teen mothers (13.3%) has remained about the same since 1990 (13.8%).

These 20,161 babies and their young mothers stand a greater risk of poor outcomes such as health complications, low educational attainment, low earning potential, poverty, and reliance on public assistance.⁽³³⁾ Teens are less likely than adults to seek timely prenatal care and are more likely to have low birth weight babies. Eighty-four percent of Ohio teen mothers are not married when they give birth. [For more information on teen births in Ohio, see CDF-Ohio's *Teen Births: A County-by-County Factbook* (1998), available for download from our web site (<http://www.cdfohio.org>).]

Births to Mothers without a High School Diploma

More than one in six Ohio children (17.9%) were born to mothers without a high school diploma in 1997—an improvement over the 1990 rate of 19.4%, but still cause for concern.

A parent's educational achievement may affect their child's chances for success in school, and in life. Children whose parents have high school diplomas score better on reading achievement tests than youngsters whose parents do not have high school diplomas.⁽³⁴⁾ A child is half as likely to drop out of school if both parents are high school graduates.⁽³⁵⁾ Mothers with more education are more likely to read to their children daily, an indicator of the degree of preparedness for school. Seventy-seven percent of mothers with a

college degree report reading to their children daily, compared with 37% of mothers without a high school diploma.⁽³⁶⁾

Births to Ohio Unmarried Parents Rising

Births to unmarried parents increased from 28.9% of births in 1990 to 34.0%—51,400 babies—in 1997. Teen births accounted for only one-third of all births to unmarried parents in 1997.

Married parents are legally bound to support their children to age 18. Paternity (identifying the father) must be established for children born to unmarried parents before a child support payment order can be issued. County child support enforcement agencies help unmarried custodial parents establish paternity and collect support for their children.

Child Health Indicators Mixed

Birth weight serves as one of the most important predictors of a child's subsequent health and survival. Low birth weight infants are six times more likely to die in the first year of life than those of normal birth weight. Low birth weight babies who do survive are at much greater risk of birth defects, learning disabilities, and developmental delays. In 1997, 7.7% of babies born to Ohio mothers (1 in 13) were of low birth weight (under 5.5 pounds), slightly worse than the 1990 rate of 7.1%.

Over the same time period, the percentage of Ohio women receiving timely prenatal care increased. Fourteen percent of women who gave birth in Ohio in 1997 (1 in 7) did not begin prenatal care within the first 90 days of pregnancy, the recommended time period for starting prenatal care. This is an improvement over the 1990 rate, when 18.9% of pregnant women received late or no prenatal care.

When expectant mothers seek prenatal care in the first 90 days of their pregnancy, doctors and nurses can identify major maternal risk factors including smoking and drug and alcohol use, provide counseling on good nutrition, and prescribe prenatal vitamins. Early prenatal care improves the likelihood of a safe delivery and a healthy baby and reduces health care costs before and after delivery. Healthy babies are much less likely to require prolonged medical care and special services such as special education once they reach school age.

Children Insured by Medicaid

Nationally, over 11 million children lack health insurance.⁽³⁷⁾ Uninsured children are six times more likely to go without medical care, and five times more likely to use the hospital emergency room as a regular health care source than insured children. In Ohio, nearly 300,000 children at all income levels are uninsured.⁽³⁸⁾

History

In 1997, Congress and President Clinton approved a major advance for children's health coverage. The Children's Health Insurance Program (CHIP) provides Ohio up to \$115 million in federal funds annually to cover uninsured

children. A state match of \$48 million is required to draw down all the federal funds.

Uninsured children with family incomes too high for Medicaid but too low to buy private coverage can be covered by CHIP, with a federal maximum income limit of 200% of poverty, or \$22,120 annually for a family of two.

Healthy Start in Ohio

Ohio expanded Medicaid coverage for children in the state's 1998–1999 budget. This expansion, called Healthy Start, kicked off in January 1998, and uses CHIP/Medicaid dollars to cover Ohio children with incomes up to 150% of poverty, or \$16,590, per year for a single parent with one child. Twenty-nine states already, or plan to, cover children at 200% of poverty or greater.⁽³⁹⁾

Medicaid was selected as the vehicle for Healthy Start because it provides comprehensive, preventive coverage with benefits designed specifically for children. This array of benefits includes immunizations, well-child checkups, school physicals, and hearing, vision and dental screening—services children need to stay healthy and ready to learn.

Medicaid also is cost effective, with comprehensive benefits costing about \$720 per year, per child, in Ohio (more for children with disabilities). The federal government pays 58% of Ohio's costs. In December, 1998, 560,700 Ohio children relied on Medicaid, down from 631,000 in July, 1995. Medicaid is not a welfare program. As of December, 1998, well over half of children on Medicaid did not receive cash assistance.⁽⁴⁰⁾

Ohio was one of the first eight states to implement CHIP. Between January and December, 1998, over 85,000 Ohio children enrolled in the expansion. In December, 1998, 65,486 out of the original 85,000 new enrollees were still covered by Medicaid. Over 19,700 new enrollees had left the Medicaid program, due to failure to reapply after six months or increases in family income. However, many eligible children are not enrolled; by July, 1999, 133,000 eligible children are expected to enroll in the expansion.

Finally, Ohio plans to extend health insurance to uninsured children between 151% and 200% of poverty in January, 2000, as allowed by federal law. A task force appointed by former Governor Voinovich recommended this expansion in its final report issued July, 1998. Governor Taft included the task force's recommendations in his 1999–2000 budget to cover an estimated 27,000 uninsured children statewide, beginning January, 2000.

Earned Income Credits and Child Support: Tools for Self-Sufficient Families

Earned Income Credits

The federal earned income credit (EIC) provides a tax incentive to encourage families to work. It targets low- and moderate-income working families. State EICs usually piggyback as a percentage of the federal EIC.

Originally enacted in 1975 in the Tax Reform Act under President Ford to offset regressive social security, local, and state taxes and to supplement the earnings of low-wage workers, the federal EIC has received consistent bipartisan support through several expansions:

- 1987: Indexed for inflation under President Reagan
- 1990: Expanded under President Bush
- 1993: Expanded to include childless families with incomes less than \$10,000 under President Clinton

Families find their EIC by looking at a table, similar to the Tax Table, in the tax instructions. The amount they receive depends upon their adjusted gross income and the number of children they have. Eligible taxpayers can elect to receive the credit during the year in their regular pay checks or can wait to claim a refund on their April 15 tax return the following year.

Federal Earned Income Credits, Tax Year 1998			
Family Size	Maximum Credit	Income Range for Maximum Credit	Poverty Level (1998)
1 child	\$2,271	\$6,600-12,300	\$10,850 (1 parent) \$13,650 (2 parents)
2 children	\$3,756	\$9,300-12,300	\$13,650 (1 parent) \$16,450 (2 parents)
no children (adults aged 25-64)	\$341	\$4,400-5,600	\$8,050 (individual) \$10,850 (married couple)

The federal earned income credit reaches more working families, and moves more of them out of poverty, than any other public program.

How This Affects Ohio Children

The Federal EIC has been credited with lifting 4.6 million people in working families out of poverty, including 2.4 million children, thus reducing poverty among young children by nearly one-fourth. The federal EIC reaches more working families, and moves more of them out of poverty, than any other public program.

Studies have also credited the EIC with increasing work effort among single mothers. More than half of the substantial increase in employment within this

Earned income credits demonstrate how a tax incentive can encourage families with children to work or increase work effort in order to provide for their children.

Increase in the Number of Ohio Families Benefiting from the Federal EIC over Time

	1990	1996 ^a	1997
families receiving EIC	442,844	612,946	672,806
average credit	\$565	\$1,361	\$1,449

^aIn 1996:

- 94% of money refunded went to families with incomes less than \$20,000
- 75% of money refunded went to families with incomes less than \$15,000

group from 1984 to 1996 was due to the incentive provided by the federal earned income credit.

Refundable vs. Non-Refundable Tax Credits

With a refundable tax credit, if the amount of the credit exceeds the taxpayer's federal income tax liability, the family receives the excess amount as a tax refund. Nonrefundable credits, on the other hand, can only offset taxes owed, providing no benefit to families who do not have a tax liability. A refundable credit therefore provides greater benefits to families.

States with Refundable Earned Income Credits

State	Percentage of Federal EIC	State	Percentage of Federal EIC
Kansas	10%	Vermont	25%
Maryland	12.5%	Wisconsin with 1 child	4%
Massachusetts	10%	with 2 children	14%
Minnesota	25%	with 3 children	43%
New York	20%		

Conclusion

Earned income credits demonstrate how a tax incentive can encourage families with children to work or increase work effort in order to provide for their children. EIC targets low- and moderate-income working families. The federal EIC tax table specifically tailors the amount provided to families based on their earned income and number of children.

Child Support Collections

Parents must support their children financially until age 18. It is difficult to ensure this support for many children of divorced or unmarried parents. Children supported by just one parent usually do not have the same resources as children supported by both parents. The Ohio Office of Child Support and each of the 88 county child support agencies work to help collect financial support owed children by both parents.

Ohio's child support program contributes to the well-being of over one million children, more than any other public program except public education. More than \$1.5 billion was collected for children in 1998, up from \$810 million in 1990.

Receiving child support can make a major difference in a child's life. In fact, for some children, it can mean the difference between living above or below the poverty line. For others, regular child support payments can help prevent their family from returning to public assistance.

In 1997 alone, 51,400 babies—about one-third of all children born in Ohio—were born to unmarried parents, and an estimated 42,800⁽⁴¹⁾ children were affected by their parents' divorce. That is, each year almost 100,000 children are added to those needing child support.

Tools To Collect Money Owed to Ohio's Children

Statewide, one in three (33.8%) children due child support received some payment in 1997, up from one in five (20.7%) in 1990. In fact, from 1990 to 1997, 67 counties improved the percentage of cases in which some payment was made during the year; of those counties that did not improve, some maintained already above average rates.

Ohio children who received some support in 1997 received an average of \$3,224, or \$62 a week. Average county collection rates ranged from \$27 to \$119 a week, with the average being \$62. To put this amount in perspective, the average cost for one week of child care for a toddler in a child care center is \$86.

Child support agencies have raised their collection rates and amounts by employing many of the following practices:

- Seventy-two percent of all collections in Ohio come from *wage withholding*. Ohio leads the nation in wage withholding.
- Four percent of all collections in Ohio come from *tax return interception*.
- *Absent parents can be located* through the Ohio Parent Locator Service, which pulls information from the Social Security Administration, the Ohio Bureau of Motor Vehicles, the Ohio Department of Taxation, the Ohio Bureau of Employment Services, three national credit agencies, and lists of newly hired employees.
- *Delinquent parents may be penalized* for repeated refusal to pay child support by having professional and drivers licenses revoked and being posted on "Most Wanted" lists.

Seventy-two percent of all child support collections in Ohio come from wage withholding. Ohio leads the nation in wage withholding.

Paternity establishment (identifying the father) has also improved, from 17,858 paternities established in 1990 to 55,253 in 1998, a threefold increase.

Conclusion

With large numbers of Ohio children affected by divorce and born to unmarried parents, many will need child support. Child support is crucial for children in families participating in Ohio Works First (Ohio's welfare reform program). As families exhaust their three-year cash assistance time limits, their children will need the resources of both parents even more.

Ohio Works First: Moving from Welfare to Work

The three-year time limits clock started ticking for thousands of Ohio Works First (OWF) families in October, 1997. More than 100,000 poor families, including more than 200,000 children, receive cash assistance through OWF; more than 26,000 adults may exhaust their OWF time limit in October, 2000, and no longer receive cash assistance. A family with children and an income at or below approximately 63% of the poverty level (about \$8,744 annually, or \$4.20 an hour for a family of three) is eligible for OWF.

Caseloads have declined by nearly 50% since September, 1995. A strong economy and welfare reform are most often cited for this drop in caseloads. However, in addition to work, families have left OWF for marriage, relocation, sanctions, and other reasons, and fewer families are entering the program.

Ohio Works First provides temporary cash assistance and education, training, and work experience to help families find jobs. It helps eliminate barriers to employment, such as lack of child care, health care, transportation, and food. County commissioners are responsible for implementing federal and state laws.

How OWF Affects Children

Children who grow up poor often have poorer health, lower school achievement, more stress, and less access to quality child care, housing, food, and schools that can mitigate the effects of poverty. OWF provides incentives and tools to help parents become self-sufficient and break the cycle of poverty.

Ohio Works First helps to educate parents by allowing them to count as work

- education activities that are directly related to employment for participants who have not earned a high school diploma/GED;
- education activities for participants that will lead to a high school diploma/GED; and
- post-secondary education such as employment-related courses at community colleges.

History⁽⁴²⁾

In 1935, during the Depression, a cash assistance program, later called Aid to Dependent Children, was established to encourage the care of needy children in their homes. The 1988 Family Support Act established the JOBS (Job Opportunities and Basic Skills) program. JOBS encouraged and often

Profile of Ohio Works First Families,^a December, 1998^b	
Assistance Groups/Families: The average family has three persons; a mother and two children. About 32% of the caseload are child-only cases, where cash assistance is provided only to children living with their grandparents or other relatives who do not qualify for assistance. Child-only cases are not subject to time limits.	113,718
Adults: Nearly 29% of caseload.	83,340
Children: More than 71% of the caseload. Approximately one in 15, or 6.7%, Ohio children receive assistance through OWF.	207,203
Adults with Earnings: 24% of the caseload, up from 8% in September, 1995. Ohio expanded the Earned Income Disregard (SHB 408) to allow families to keep more of what they earned while on assistance to ease the transition from cash assistance to work. Average adult earnings: \$4.92/hour.	21,696
Adults with a High School Education: 48% of the adult caseload has a high school diploma/GED. This percentage has dropped as the caseload has declined. More participants with a high school diploma or GED have left OWF.	40,326
Families Subject to Time Limits: Participants can receive cash benefits for up to 36 months (need not be consecutive). After 36 months, cash benefits cannot be collected unless the participant is exempt due to hardship. Participants must show good cause to access the remaining 24 months of cash benefits after their two-year break.	77,813
Adults Receiving OWF Longer than 16 Months (2/99): Some of these families may be the first to hit time limits in October, 2000.	26,077
FY1999 Federal All-Family Participation Rate: FY1999 work requirements: participants must work 25 hours per week. Thirty-five percent of caseload must meet federal work requirements.	48.7%
FY1999 Federal Two-Parent Participation Rate: Participants must work 35 to 55 hours per week (depending on their child care arrangements). Ninety percent of caseload must meet federal work requirements.	73.6%

^aAll data from, or derived from, the Ohio Department of Human Services, Demographics for OWF Combined Recipients, or GRP219RH Report for December, 1998 as of 12/31/98, except for participation rate data which is from the Participation Rates report produced by the Bureau of Performance Management; and data on the number of adults receiving OWF longer than 12 months is from Ohio Department of Human Services Adults by Months on OWF Since October 1997 by Counties as of February, 1999 report, Office of Research.

^bUnless otherwise noted.

required parents to work or to engage in education and training activities in exchange for cash assistance.

Ohio enacted SHB 167, the bipartisan welfare reform law, in 1995. The federal *Personal Responsibility and Work Opportunity Reconciliation Act of 1996* then established the Temporary Assistance for Needy Families (TANF) program, ending welfare as we know it. In 1997 Ohio built on state and federal welfare reform law and continued bipartisan support with enactment of SHB 408. Time limits and sanctions became conditions of the cash assistance program.

Ohio's new welfare law named the state's TANF program Ohio Works First and created the Prevention, Retention, and Contingency program. The PRC program provides benefits and services to working poor families to help them avoid cash assistance.

How OWF Works

To be eligible for OWF, a family must have (1) a child, or custody of a child, and (2) an income approximately 63% of the federal poverty level (about \$8,744 annually, or \$4.20/hour for a family of three) or less. A child's eligibility ends at age 18, or if the child is still in high school, at age 19. OWF-eligible families are generally eligible for other public programs, including Medicaid, food stamps, and child care, while involved in activities leading to self-sufficiency. The maximum monthly benefit for a family of three is \$362 (December, 1998, average per family: \$314).

Participants can receive cash benefits for up to 36 months, which need not be consecutive. After 36 months, cash benefits cannot be collected unless the participant is exempt due to hardship. Participants must show good cause to receive up to 24 months of additional cash benefits, after a two-year break.

Federal funding for OWF comes as a block grant set at the same annual amount for a six-year period. But while state and federal laws guide the program, county commissioners make many of the decisions regarding OWF. Commissioners must enter into partnership agreements with the state that detail program design and administration along with county and state obligations. Human Services Planning Committees advise and are appointed by the commissioners.

The program is not an entitlement; eligibility does not guarantee benefit receipt. To receive benefits in FY1999, participants must work 25 hours per week. Thirty-five percent of the caseload must meet these federal work requirements in 1999; this percentage increases to 40% in 2000.

Summary

More than 100,000 Ohio children live in families whose three-year welfare time limits may expire in October, 2000. While the rate of adults with paychecks increased from 8% to 24% from 1995 to 1998, only half of the remaining single parents are in 25-hour-a-week work activities.

EDUCATION

READING: 68% of the 125,823 Ohio fourth graders who took the fourth grade reading proficiency test in March, 1998, passed the test.

Under the new 1999 proficiency standards, only 47% would have passed the test. This means 53%, or 66,096 students, would require reading intervention as set forth by Ohio law.

All Ohio Public School Districts

4th Grade Reading Proficiency Test Results (March, 1998)

District	Enrollment (1996-1997)		Poverty (1996-1997): % of school lunches served free or at reduced price	% passing the 4th grade reading test		no. of 4th graders tested

SO SMALL

FAMILY ECONOMICS

HEALTH STATUS: Growing and Learning

Ohio Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

40.4% of babies born in Ohio in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 17.4% of newborns had at least two of these disadvantages, and 7.2% had all three.

Profile of Ohio Newborns		
	1990	1997
Number of Births	166,686	151,396
% births to a teen mother	13.8%	13.3%
% births to a mother without a high school diploma	19.3%	17.8%
% births to unmarried parents	28.9%	34.0%

% low-birthweight (5.5 lb. or under)	7.1%	7.8%
% late or no prenatal care (late: after 90 days)	18.4%	14.0%

Ohio Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)	Additional Children Expected To Enroll
Children receiving Medicaid 560,731	Medicaid expansion to 150% of poverty, expected but not yet enrolled 83,888
*49,309 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	Proposed expansion to 200% of poverty, likely to enroll 20,000
	Number of additional children expected to enroll 103,888

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 672,806 Ohio families received the tax credit in tax year 1997; the average credit was \$1,449.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 34% of Ohio families owed child support received at least one cash payment in 1997, up from 21% in 1990. The average weekly payment for a child was \$62.

OHIO WORKS FIRST: Moving from Welfare to Work

Ohio public assistance caseloads dropped by 46% from September, 1995, to September, 1998. However, more than 26,077 Ohio adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 47% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 2,333 Auglaize County families received the tax credit in tax year 1997; the average credit was \$1,350.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 49% of Auglaize County families owed child support received at least one cash payment in 1997, down from 60% in 1990. The average weekly payment for a child was \$51.

OHIO WORKS FIRST: Moving from Welfare to Work

Auglaize County public assistance caseloads dropped by 51% from September, 1995, to September, 1998. However, more than 9 Auglaize County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 74% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 2,005 Champaign County families received the tax credit in tax year 1997; the average credit was \$1,424.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 27% of Champaign County families owed child support received at least one cash payment in 1997, down from 33% in 1990. The average weekly payment for a child was \$86.

OHIO WORKS FIRST: Moving from Welfare to Work

Champaign County public assistance caseloads dropped by 54% from September, 1995, to September, 1998. However, more than 14 Champaign County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 49% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARLY CARE AND EDUCATION: Opportunities for Reading Readiness

High-quality child care and Head Start programs can help children develop reading readiness skills. Full-time child care can cost more than \$100 per week, per child. Ohio's child care assistance program helps low-income parents work and afford child care.

Crawford County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

40.8% of babies born in Crawford County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 19.7% of newborns had at least two of these disadvantages, and 6.4% had all three.

Crawford County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

	Profile of Crawford County Newborns

	Number of additional children expected to enroll 371

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 3,367 Crawford County families received the tax credit in tax year 1997; the average credit was \$1,474.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 43% of Crawford County families owed child support received at least one cash payment in 1997, up from 35% in 1990. The average weekly payment for a child was \$75.

OHIO WORKS FIRST: Moving from Welfare to Work

Crawford County public assistance caseloads dropped by 60% from September, 1995, to September, 1998. However, more than 21 Crawford County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 86% of OWF parents meet 20-hour-a-week federal work participation requirements.

Erie County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)	Additional Children Expected To Enroll
Children receiving Medicaid 2,913	Medicaid expansion to 150% of poverty, expected but not yet enrolled 695
*290 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	Proposed expansion to 200% of poverty, likely to enroll 148
	Number of additional children expected to enroll 843

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 5,042 Erie County families received the tax credit in tax year 1997; the average credit was \$1,494.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 27% of Erie County families owed child support received at least one cash payment in 1997, down from 39% in 1990. The average weekly payment for a child was \$56.

OHIO WORKS FIRST: Moving from Welfare to Work

Erie County public assistance caseloads dropped by 67% from September, 1995, to September, 1998. However, more than 35 Erie County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 60% of OWF parents meet 20-hour-a-week federal work participation requirements.

Geauga County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

34.8% of babies born in Geauga County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 5.4% of newborns had at least two of these disadvantages, and 2.3% had all three.

Geauga County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Profile of Geauga County Newborns

Number of additional children expected to enroll		1,461

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 2,099 Geauga County families received the tax credit in tax year 1997; the average credit was \$1,270.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 49% of Geauga County families owed child support received at least one cash payment in 1997, down from 55% in 1990. The average weekly payment for a child was \$86.

OHIO WORKS FIRST: Moving from Welfare to Work

Geauga County public assistance caseloads dropped by 68% from September, 1995, to September, 1998. However, more than 4 Geauga County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 41% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 1,960 Hardin County families received the tax credit in tax year 1997; the average credit was \$1,439.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 55% of Hardin County families owed child support received at least one cash payment in 1997, up from 45% in 1990. The average weekly payment for a child was \$68.

OHIO WORKS FIRST: Moving from Welfare to Work

Hardin County public assistance caseloads dropped by 76% from September, 1995, to September, 1998. However, more than 7 Hardin County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 78% of OWF parents meet 20-hour-a-week federal work participation requirements.

Huron County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)

Children receiving Medicaid	2,528
*383 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	

Additional Children Expected To Enroll

Medicaid expansion to 150% of poverty, expected but not yet enrolled	413
Proposed expansion to 200% of poverty, likely to enroll	120
Number of additional children expected to enroll	533

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 4,156 Huron County families received the tax credit in tax year 1997; the average credit was \$1,480.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 51% of Huron County families owed child support received at least one cash payment in 1997, the same as from 50% in 1990. The average weekly payment for a child was \$53.

OHIO WORKS FIRST: Moving from Welfare to Work

Huron County public assistance caseloads dropped by 81% from September, 1995, to September, 1998. However, more than 1 Huron County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 71% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 5,230 Lawrence County families received the tax credit in tax year 1997; the average credit was \$1,556.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 22% of Lawrence County families owed child support received at least one cash payment in 1997, down from 23% in 1990. The average weekly payment for a child was \$53.

OHIO WORKS FIRST: Moving from Welfare to Work

Lawrence County public assistance caseloads dropped by 40% from September, 1995, to September, 1998. However, more than 305 Lawrence County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 78% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARLY CARE AND EDUCATION: Opportunities for Reading Readiness

High-quality child care and Head Start programs can help children develop reading readiness skills. Full-time child care can cost more than \$100 per week, per child. Ohio's child care assistance program helps low-income parents work and afford child care.

Mahoning County Children Enrolled

Child Care Assistance		Head Start

Who Is Eligible?

Working families earning up to 185% of poverty (\$9.84 per hour for a parent and one child) and families participating in Ohio Works First activities.

Who Is Eligible?

Three- and four-year-old children in families earning up to 100% of poverty (\$5.32 per hour for a parent and one child).

FAMILY ECONOMICS

HEALTH STATUS: Growing and Learning

Mahoning County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

44.4% of babies born in Mahoning County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 19.7% of newborns had at least two of these disadvantages, and 8.2% had all three.

Mahoning County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Profile of Mahoning County Newborns

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 17,316 Mahoning County families received the tax credit in tax year 1997; the average credit was \$1,440.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 35% of Mahoning County families owed child support received at least one cash payment in 1997, up from 16% in 1990. The average weekly payment for a child was \$37.

OHIO WORKS FIRST: Moving from Welfare to Work

Mahoning County public assistance caseloads dropped by 42% from September, 1995, to September, 1998. However, more than 1,084 Mahoning County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 55% of OWF parents meet 20-hour-a-week federal work participation requirements.

Miami County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

35.2% of babies born in Miami County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 16.0% of newborns had at least two of these disadvantages, and 6.1% had all three.

Profile of Miami County Newborns

	1990	1997
Number of Births	1,280	1,258
% births to a teen mother	14.2%	13.4%
% births to a mother without a high school diploma	18.4%	15.7%
% births to unmarried parents	20.5%	28.5%
Health Indicators:		
% low-birthweight (5.5 lb. or under)	5.7%	5.4%
% late or no prenatal care (late: after 90 days)	13.5%	13.8%

Miami County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)

Children receiving Medicaid	2,545
*343 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	

Additional Children Expected To Enroll

Medicaid expansion to 150% of poverty, expected but not yet enrolled	993
Proposed expansion to 200% of poverty, likely to enroll	201
Number of additional children expected to enroll	1,194

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 5,399 Miami County families received the tax credit in tax year 1997; the average credit was \$1,437.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 37% of Miami County families owed child support received at least one cash payment in 1997, up from 27% in 1990. The average weekly payment for a child was \$80.

OHIO WORKS FIRST: Moving from Welfare to Work

Miami County public assistance caseloads dropped by 75% from September, 1995, to September, 1998. However, more than 2 Miami County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 53% of OWF parents meet 20-hour-a-week federal work participation requirements.

HEALTH STATUS: Growing and Learning

Pike County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

50.7% of babies born in Pike County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 22.4% of newborns had at least two of these disadvantages, and 8.4% had all three.

Profile of Pike County Newborns		1990	1997
Number of Births		397	357
% births to a teen mother		25.2%	19.3%
% births to a mother without a high school diploma		34.8%	29.5%
% births to unmarried parents		28.5%	33.3%
Health Indicators:			
% low-birthweight (5.5 lb. or under)		6.3%	7.3%
% late or no prenatal care (late: after 90 days)		14.9%	15.5%

Pike County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)	Additional Children Expected To Enroll
Children receiving Medicaid 2,665	Medicaid expansion to 150% of poverty, expected but not yet enrolled 0
*380 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	Proposed expansion to 200% of poverty, likely to enroll 36
	Number of additional children expected to enroll 36

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 2,193 Pike County families received the tax credit in tax year 1997; the average credit was \$1,550.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 25% of Pike County families owed child support received at least one cash payment in 1997, up from 18% in 1990. The average weekly payment for a child was \$53.

OHIO WORKS FIRST: Moving from Welfare to Work

Pike County public assistance caseloads dropped by 47% from September, 1995, to September, 1998. However, more than 83 Pike County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 52% of OWF parents meet 20-hour-a-week federal work participation requirements.

	September, 1995	September, 1998

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 4,955 Ross County families received the tax credit in tax year 1997; the average credit was \$1,501.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 47% of Ross County families owed child support received at least one cash payment in 1997, up from 18% in 1990. The average weekly payment for a child was \$55.

OHIO WORKS FIRST: Moving from Welfare to Work

Ross County public assistance caseloads dropped by 54% from September, 1995, to September, 1998. However, more than 146 Ross County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 56% of OWF parents meet 20-hour-a-week federal work participation requirements.

% late or no prenatal care (late: after 90 days)	15.2%	11.5%

Summit County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Children Currently Enrolled in Medicaid (December, 1998)	Additional Children Expected To Enroll
Children receiving Medicaid 28,611 *1,815 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	Medicaid expansion to 150% of poverty, expected but not yet enrolled 4,048
	Proposed expansion to 200% of poverty, likely to enroll 881
	Number of additional children expected to enroll 4,929

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 31,106 Summit County families received the tax credit in tax year 1997; the average credit was \$1,395.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 33% of Summit County families owed child support received at least one cash payment in 1997, up from 9% in 1990. The average weekly payment for a child was \$40.

OHIO WORKS FIRST: Moving from Welfare to Work

Summit County public assistance caseloads dropped by 32% from September, 1995, to September, 1998. However, more than 2,070 Summit County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 46% of OWF parents meet 20-hour-a-week federal work participation requirements.

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 951 Vinton County families received the tax credit in tax year 1997; the average credit was \$1,585.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 53% of Vinton County families owed child support received at least one cash payment in 1997, up from 44% in 1990. The average weekly payment for a child was \$46.

OHIO WORKS FIRST: Moving from Welfare to Work

Vinton County public assistance caseloads dropped by 46% from September, 1995, to September, 1998. However, more than 37 Vinton County adults may use up their three-year Ohio Works First (OWF) time limit by October, 2000; 74% of OWF parents meet 20-hour-a-week federal work participation requirements.

Wyandot County Children

County seat:
Upper Sandusky
Population rank: 82

County population: 22,709
Poverty rate: 6.6%
Poverty rank: 75

Child population: 6,060
Child poverty rate: 9.1%
Child poverty rank: 76

EDUCATION

READING: 81% of the 247 Wyandot County fourth graders who took the fourth grade reading proficiency test in March, 1998, passed the test (state average: 68%).

Under the new 1999 proficiency standards, only 59% would have passed the test. This means 41%, or 102 students, would require reading intervention as set forth by Ohio law.

Wyandot County Public School Districts: 100% of County School Enrollment

4th Grade Reading Proficiency Test Results (March, 1998)

District	Enrollment (1996-1997)		Poverty (1996-1997): % of school lunches served free or at reduced price	% passing the 4th grade reading test		no. of 4th graders tested
	school year enrollment	% of total county enrollment		1998 standard	1999 standard	
Upper Sandusky Village	1,860	46%	24%	80%	58%	95
Mohawk Local	1,212	30%	17%	85%	67%	85
Carey Village	979	24%	21%	78%	49%	67

EARLY CARE AND EDUCATION: Opportunities for Reading Readiness

High-quality child care and Head Start programs can help children develop reading readiness skills. Full-time child care can cost more than \$100 per week, per child. Ohio's child care assistance program helps low-income parents work and afford child care.

Wyandot County Children Enrolled

Child Care Assistance		Head Start	
1995	1998	1995	1998
29	33	48	51

Who Is Eligible?

Working families earning up to 185% of poverty (\$9.84 per hour for a parent and one child) and families participating in Ohio Works First activities.

Who Is Eligible?

Three- and four-year-old children in families earning up to 100% of poverty (\$5.32 per hour for a parent and one child).

FAMILY ECONOMICS

HEALTH STATUS: Growing and Learning

Wyandot County Births: Risk Factors

Certain risk factors at birth increase the odds of childhood poverty and difficulties in school.

35.4% of babies born in Wyandot County in 1997 began life with at least one of these risk factors: their mother had not finished high school, their mother was a teen, or their parents were not married. 16.4% of newborns had at least two of these disadvantages, and 7.8% had all three.

Wyandot County Children Insured by Medicaid

Medicaid is a health insurance program for low- and moderate-income families, providing health care that children need to be healthy and able to learn.

For a single parent with one child:
150% of poverty = \$7.98/hour
200% of poverty = \$10.63/hour

Profile of Wyandot County Newborns

	1990	1997
Number of Births	327	268
% births to a teen mother	10.7%	15.3%
% births to a mother without a high school diploma	11.3%	14.6%
% births to unmarried parents	16.5%	29.9%
Health Indicators:		
% low-birthweight (5.5 lb. or under)	6.1%	7.1%
% late or no prenatal care (late: after 90 days)	17.4%	9.4%

Children Currently Enrolled in Medicaid (December, 1998)	Additional Children Expected To Enroll
Children receiving Medicaid 532	Medicaid expansion to 150% of poverty, expected but not yet enrolled 225
*115 of these children were covered as a result of the 1998 expansion of children's Medicaid to 150% of poverty. Not all eligible children have enrolled.	Proposed expansion to 200% of poverty, likely to enroll 51
	Number of additional children expected to enroll 276

EARNED INCOME CREDIT AND CHILD SUPPORT: Tools for Self-Sufficient Families

Earned Income Credit. The federal Earned Income Credit (EIC) lifts more children out of poverty than any other public program. The EIC is targeted to low- and moderate-income working families with children. 1,263 Wyandot County families received the tax credit in tax year 1997; the average credit was \$1,359.

Child Support. Financial support from both parents can reduce the need for public assistance and improve a child's life. 72% of Wyandot County families owed child support received at least one cash payment in 1997, up from 47% in 1990. The average weekly payment for a child was \$58.

OHIO WORKS FIRST: Moving from Welfare to Work

Wyandot County public assistance caseloads dropped by 60% from September, 1995, to September, 1998. Sixty-seven percent of Ohio Works First (OWF) parents meet 20-hour-a-week federal work participation requirements. [OWF time limit data are not applicable to Wyandot County.]

	September, 1995	September, 1998
Number of adults earning paychecks	10	11
Number of adults receiving cash assistance	94	33
Number of children receiving cash assistance	197	62
Percentage of adults with a high school diploma/GED	69%	45%

Fact Sheet Calculations and Notes

Calculations

Rounding Rule: All calculations were made before rounding. When rounding five and above, we rounded up. When rounding four and below, we rounded down.

Percent Change Over Time: Computed by comparing the base year data for the indicator with the current year data. To calculate percent change, the value for the base year was subtracted from the value for the current year and that quantity was divided by the value for the base year. The result was multiplied by 100.

Federal Poverty Guidelines: The 1999 Department of Health and Human Services Federal Poverty Guidelines as published in the "Notices" of the *Federal Register* (Vol. 64, No. 52, March 18, 1999, pp. 13482–13484) are used throughout this factbook, unless otherwise noted. However, rule changes or other administrative action by state departments that administer human services programs may be required before Ohio families see the increase in income eligibility for Ohio programs.

Fact Sheet Notes

County Population and Poverty Statistics

County Population: Estimate of total population by county as of July 1, 1997. Population Estimates Program, Population Division, U.S. Bureau of the Census, Washington, DC. Internet Release date: September 4, 1998; downloaded December 3, 1998.

Population Rank: Based on county population (see above). Calculations by CDF-Ohio.

Poverty Rate: Estimate of percentage of people of all ages living at or below 100% of the federal poverty level by county as of 1995. Bureau of the Census. Table A95-39, "Estimated Number and Percent People of all Ages in Poverty by County: Ohio 1995." Small Area Income and Poverty Estimates Program. Population as of July 1996 [Online]. <http://www.census.gov/cgi-bin/hhes/saipe93/gettable.pl> [02/25/99].

Poverty Rank: Based on county poverty estimate for people of all ages (see above). Calculations by CDF-Ohio.

Child Population: All persons ages 0–17. Estimates of the population of counties by age group as of July 1, 1997. Population Estimates Program, Population Division, U.S. Bureau of the Census, Washington, DC. Internet Release date: September 4, 1998; downloaded December 3, 1998. Calculations by CDF-Ohio

Child Poverty: Estimate of percentage of people under age 18 living at or below 100% of the federal poverty level by county as of 1995. Bureau of the Census. Table D95-39, "Estimated Number and Percent People of all Ages in Poverty by County: Ohio 1995." Small Area Income and Poverty Estimates Program. Population as of July 1996 [Online]. <http://www.census.gov/cgi-bin/hhes/saipe93/gettable.pl> [02/25/99].

Child Poverty Rank: Based on county poverty estimate for people under age 18 (see above). Calculations by CDF-Ohio.

Education and Reading

March, 1998, Fourth Grade Proficiency Test Pass Rate, 1998 and 1999 Standards, by County:

Total number fourth grade students in the county who passed the test at the 1998 or the 1999 standard, respectively, divided by the total number of fourth grade students in the county who took the test. Ohio Department of Education. *Ohio Fourth Grade Proficiency Test Results, Proficiency Rates by Different Standards, 1998 Test Administration* [Online]. http://ode000.ode.ohio.gov/www/ims/proficiency/4th_prof_mar98_standards.txt [08/17/98]. County totals and county pass rates calculated by CDF-Ohio.

Largest County School Districts and 1996–1997 Enrollment/Percentage of County Enrollment: The three largest districts, or in cases where a county has three or fewer districts within its boundaries, all districts within a county. (Although some Ohio school districts cross county lines, the Ohio Department of Education has assigned each school district to a single county.) Based on the total head count of students being instructed by the district (except non-public students) and students who are residents of the district and are attending an Educational Service Center, Joint Vocational School District, or Post-Secondary Institution as of October 1996. Ohio Department of Education. *School District Report Card Data: Current Year District Enrollment* [Online]. <http://ode000.ode.ohio.gov/www/ims/world/rc1037.txt> [11/23/98]. Percentage of county enrollment calculated by CDF-Ohio.

1996–1997 Percentage of Lunches Served Free or at Reduced Price: The number of free or reduced-price lunches served to students in a district divided by the total number of lunches served to students in the district. Children living in families earning up to 130% of the federal poverty level (\$14,378 for a family of two) are eligible for free lunches through the federal school lunch program. Children living in families earning more than 130% but less than 185% of the federal poverty level (\$20,461 for a family of two) are eligible for reduced-price lunches. Ohio Department of Education, Division of Child Nutrition Services School Lunch Data [Online]. <ftp://www.ode.ohio.gov/lncches9697.asc> [10/19/98]. Percentage calculated by CDF-Ohio.

Percentage of Students Passing the Fourth Grade Reading Proficiency Test, 1998 and 1999 Standards, by District: Total number fourth grade students in the district who passed the test at the 1998 or 1999 standard, respectively, divided by the total number of fourth grade students in the district who took the test in March, 1998. Ohio Department of Education. *Ohio Fourth Grade Proficiency Test Results, Proficiency Rates by Different Standards, 1998 Test Administration* [Online]. http://ode000.ode.ohio.gov/www/ims/proficiency/4th_prof_mar98_standards.txt [08/17/98].

Early Childhood Education

Enrollment in Child Care Assistance, 1995: Includes all children enrolled in child care assistance whose parents met eligibility criteria. Ohio Department of Human Services. "Table 7-S: Child Care, Calendar Year 1995." *Public Assistance Monthly Statistics*, Calendar Year 1995. Supplemented by interviews with departments of human services in the following counties: Adams, Ashland, Auglaize, Brown, Champaign, Clinton, Delaware, Geauga, Holmes, Logan, Madison, Morrow, Paulding, Pike, and Vinton.

Enrollment in Child Care Assistance, 1998: Includes all children enrolled in child care assistance whose parents met eligibility criteria. Ohio Department of Human Services. "Table 7-S: Child Care." *Public Assistance Monthly Statistics*. January–December, 1998. Portage County figures provided by Portage County Department of Human Services. Calculations by CDF-Ohio.

Enrollment in Head Start, 1995 and 1998: The number preschool children in each county enrolled in Head Start in 1995 and 1998. Ohio Department of Education, unpublished county-by-county reports, 1995 and 1998.

Risk Factors in Ohio Births

Percentage of Babies Born with One, Two, or Three Risk Factors: Department of Health Birth Records, Statistical Analysis Unit, 1997 [CD-ROM]. Concept borrowed from *KIDS COUNT Data Book*, The Annie E. Casey Foundation, 1993, p. 13. Calculations by CDF-Ohio.

Profile of Newborns: Percentage of births to teen mothers (mothers under age 20), to mothers without a high school diploma (mothers with less than 12 years of education), or to unmarried parents; percentage of low-birthweight births (under 2500 grams, or 5.5 lbs.); and percentage of births to mothers receiving late or no prenatal care (late: after the first 90 days of pregnancy).

Ohio Department of Health, Birth Records, Statistical Analysis Unit. Data for 1997 provided on CD-ROM; 1990 data are from Ohio Department of Health, Statistical Analysis Unit, *Vital Statistics Annual Report*. Columbus: 1990. Calculations by CDF-Ohio.

Medicaid Expansion

Potential Additional Enrollment: Based on the Ohio Department of Human Services estimate that 50% of eligible children will enroll. The county enrollment estimates for the 200% expansion are based on a statewide total of 20,000 enrolled. County-level estimates for 27,000 total statewide were not available at the time of publication.

Child Support

Percentage of Families Owed Child Support That Received at Least One Payment in 1990 and 1997: IVD cases with collections (Section C, Line 16 of Form 4223) divided by the total number of IVD cases (Section A, Line 4 of Form 4223). Ohio Department of Human Services, Office of Child Support, Form 4223. Calculations by CDF-Ohio.

Average Weekly Payment to a Child: Number of cases was converted to number of children using a formula which considers the number of divorces and the number of births to unmarried parents, which resulted in a ratio of 1.24773 children per case. Total cases with collections, both ADC and non-ADC (Section C, Line 16 of Form 4223), were averaged for four quarters and then multiplied by 1.24773 to calculate the average number of children in cases with collections. Total IVD collections for 1997 (according to Table 9-S) was divided by the average number of children in cases with collections to calculate annual collections per child. Annual collections per child was divided by 52 to calculate weekly collections per child. Ohio Department of Human Services, Office of Child Support, Form 4223 and Table 9-S. Calculations by CDF-Ohio.

Earned Income Credit

Number of Families Receiving EIC by County for Tax Year 1997: IRS, Ohio District Office, Research and Analysis Division (DORA). DORA assigns families to counties by zip code, so figures represent an approximation because some zip codes cross county boundaries. The zip code is assigned to a county by where the majority of the residents live.

Average EIC Credit by County for Tax Year 1997: Total dollar amount per county divided by number of families receiving EIC per county. IRS, Ohio DORA. Calculations by CDF-Ohio.

Early Care and Education

Ohio Department of Education. Unpublished county-by-county reports, 1995 and 1998.

Ohio Department of Human Services. "Table 7-S: Child Care, Calendar Year 1995." *Public Assistance Monthly Statistics*, 1995. Supplemented by interviews with departments of human services in the following counties: Adams, Ashland, Auglaize, Brown, Champaign, Clinton, Delaware, Geauga, Holmes, Logan, Madison, Morrow, Paulding, Pike, and Vinton.

Ohio Department of Human Services. "Table 7-S: Child Care." *Public Assistance Monthly Statistics*, January–December 1998. Portage County figures provided by Portage County Department of Human Services.

Risk Factors in Ohio Births

Most of the data included in this section came from the *Vital Statistics Annual Report 1990*, provided on CD-ROM, for 1997. Ohio Department of Health, Birth Records, Statistical Analysis Unit. Columbus, Ohio.

Medicaid Expansion

Ohio Department of Human Services, Office of Medicaid, Bureau of Medicaid Policy, Health Services Research Section, "Children in Medicaid by County and Race for December 1998".

Ohio Department of Human Services, Office of Medicaid, Bureau of Medicaid Policy, Health Services Research Section, "Caseload Analysis Bulletin, December 1998".

Ohio Department of Health, "Estimates of County Level Distribution of Ohio's Uninsured Children 150%–200% of FPL (Federal Poverty Level)", Spring 1998. Calculations by CDF-Ohio.

Child Support

Collection amounts for 1990, 1997, and 1998 provided by the Ohio Department of Human Services, Office of Child Support, Data Analysis; additional data for 1990 and 1997 from Office of Child Support, Form 4233, Table 9-S.

Ohio Department of Health, Birth Records, Statistical Analysis Unit. *Vital Statistics Annual Report 1996* [CD-ROM]. Columbus: 1997.

Ohio Works First

Unless otherwise noted, the 1995 data is from the Aid to Dependent Children (ADC) Demographics Report for September, 1995, prepared by the Ohio Department of Human Services, Office of Fiscal Services, Bureau of Financial Analysis and Reporting, Reports and Statistics Section. The 1998 data is from GRP219RH, OWF Demographics Report for September, 1998, Demographics for OWF Combined Recipients, Ohio Department of Human Services, run date October 1, 1998. Both reports contain detailed data for the state by county, including source data for caseloads (assistance groups, adults, children), number of adults with earnings, and percentage of adults with high school diplomas/GED. The Participation Rates Report, produced by the ODHS Bureau of Performance Management, is the source of the all-family federal work participation rate. The report Adults by Months on OWF Since October 1997 by Counties as of February, 1999, is the source of the estimated number of adults who may hit their time limit in October, 2000. The report is produced by the ODHS Office of Research.

For **Children**, for Ohio's Future

Windows of Opportunity: Ohio Children and the 1998 Election

Ohio's new governor and legislature have a unique opportunity. They can do more to improve the lives of Ohio children than any previous administration or General Assembly. The transfer of authority for major children's programs to Ohio through block grants and the State Supreme Court's decision in the DeRolph case leave Ohio with an unprecedented opportunity to help working parents and their children.

That's the theme of Children's Defense Fund-Ohio's report, *Windows of Opportunity: Ohio Children and the 1998 Election*. In *Windows*, we have taken a comprehensive but commonsense approach to strengthening Ohio's treatment of maternal and child health, Head Start, child support enforcement, child care, and welfare reform. We also describe an Ohio Earned Income Tax Credit and, for the first time, include education among CDF-Ohio's critical issue areas. The common feature of these seven areas is their effect on large numbers of Ohio children.

Read what the Ohio press had to say about *Windows of Opportunity*. Then visit our web site and download a copy for yourself (<http://www.cdfohio.org>).

Akron Beacon Journal — "(The) Children's Defense Fund has succeeded in throwing a different light on familiar problems, inviting fresh thinking and substantive debate on the issues...The agenda set out in this document pushes for improvements while recognizing the achievements and strengths in state policies."

The Columbus Dispatch — "The 144,000 pupils entering first grade this fall will be the first ones subject to the (new reading proficiency) standards. If these children — and all those who follow — do not read at grade level when they finish the fourth grade, they will not advance. The Children's Defense Fund is mounting an aggressive campaign to alert people to these changes."

Cincinnati Post — "These type of issues bear on our ability to prepare children to read and write adequately, to get decent jobs when they're older, to get and keep the welfare rolls down. And few, really, involve spending more money. The Children's Defense Fund is right: we've come a long way, and we can do a better job still with what we've already got."

Cleveland Plain Dealer — "**A Creative Attack on Poverty:** The Ohio branch of the Children's Defense Fund has made a number of useful proposals for improving the lives of children of poor families, proposals that are worthy of careful consideration by holders of and aspirants to statewide office."

Dayton Daily News — "The Ohio Children's Defense Fund is proposing that Ohio adopt its own EITC (Earned Income Tax Credit). The money is there; the plan would cost only a small portion of the state's revenue surplus. And it would go exactly where it should: to encourage the struggling, working parent to continue to work — to be among those celebrated on Labor Day — and to make sure the children have what they need. There is no better investment for the community."

Youngstown Vindicator — "Both the Republican and Democratic gubernatorial nominees...have already responded to the defense fund report, pledging to address issues that are important to children. Focusing on these issues is a valuable service that raises the level of political debate in Ohio and holds promise for the future of the state's children."
